Conclusion

- There are limitations in this study
  - Time
  - Data

- Results and Observations
  - The most popular food venue in Toronto is coffee shop and café. But different FSAs may have slight differences in preference of food venues.
  - The number of restaurants in a FSA does not correlates to the population of the FSA. Other factors, e.g. number of tourists/visitors or number of business building/offices may be more appropriate given it is a tourist and commercial center.

- Further data should be collected and analyzed
